EXPERIENCE

Associate Software Development Engineer

JungleWorks

Jan 2022 – Sep 2023 Chandigarh

- Actively participated in **Scrum** meetings, contributing to sprint planning, backlog grooming, and sprint demos.
- Mentored and coached junior engineers in developing external **APIs**, **ELK Stack**, **Kibana**, and **PEM files**.
- Built and maintained responsive **React.js** user interfaces with reusable components, **React Hooks**, and client-side routing for production web applications.
- Improved front-end performance and reliability by profiling renders, memoizing expensive components, and integrating **React.js** views with backend **APIs** and shared design patterns.
- Integrated with external **APIs** and third-party services to enable seamless functionality and data exchange in **Node.js/Express.js**.
- Designed and implemented a scalable database schema and data models to efficiently store and retrieve data in **PostgreSQL**.
- Implemented caching mechanisms using **Redis** to improve performance and reduce database load.

Software Development Engineer

Eximpedia pte. Ltd.

Sep 2023 – May 2024 Noida

- Designed and implemented robust **RESTful APIs**, **web-hooks**, and **WebSocket** solutions to support scalable and efficient client-server interactions.
- Developed and deployed high-performance backend systems, successfully transferring web hosting from **Amazon Elastic Beanstalk** to **Azure Kubernetes Services**.
- Implemented **React.js** portal features that consumed external **REST APIs**, handling authentication flows, loading states, and error boundaries for a reliable user experience.
- Refactored data-heavy views using **React.js** patterns (memoization, list virtualization, and efficient state updates) to keep UIs responsive when rendering large result sets from backend services.
- Converted a set of APIs to **TypeScript**, enhancing type safety and maintainability.
- Designed and implemented scalable microservices on **Microsoft Azure** using **Azure Kubernetes Service (AKS)**, achieving high availability and reliability.
- Built and optimized serverless solutions using **Azure Functions**, reducing system latency by 25

Software Development Engineer

Wellwiz pvt. Ltd.

May 2024 – present Noida

- Developed and maintained a **Mobile Device Management (MDM) system** using real-time bidirectional communication:
- Implemented **WebSocket** and **secure WebSocket (WSS)** channels for remote device control
- Ensured end-to-end encryption and authentication for all device-server communication
- Owned and significantly improved an **OPMS (Operations & Project Management System)** built with **NestJS + TypeScript**:
- Built and enhanced **React.js** OPMS screens (dashboards, workflows, and configuration views) using **TypeScript**, composable UI components, and predictable client-side state for complex forms.
- Optimized complex **SQL** queries (indexing, **EXPLAIN ANALYZE**, **CTEs**, query rewriting) resulting in 40–80% performance gains on critical endpoints
- Complete authentication system: **Login**, **JWT** token issuance, refresh tokens, token validation & revocation
- Implemented **React.js** file upload flows with client-side validation (size/type), chunked or resumable uploads, and clear progress feedback tied to backend processing.
- Built upload and **file status** UIs (polling or live updates, success/failure states, and retry/cancel actions) to mirror server-side job state and reduce support overhead.

SKILLS

Node.js React.js Redux Github Git HTML
CSS Devops JavaScript Azure Redis PowerBI
MYSQL Postgre SQL
